

# Drug Therapy<sup>1,2,3</sup> vs RF Therapy<sup>4</sup>

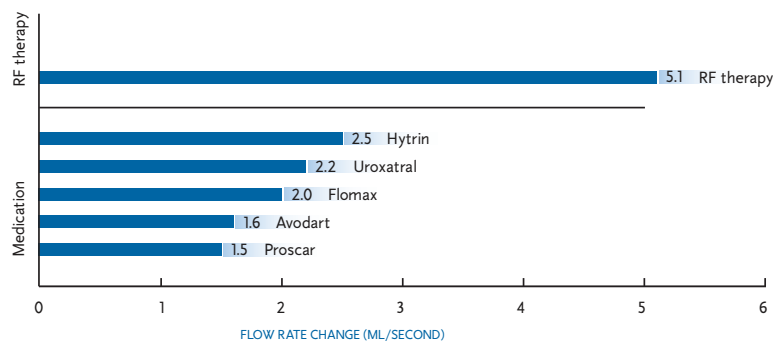

These tables present data from independent clinical studies of RF therapy for BPH and drug therapy. Because the data was not collected in a head-to-head clinical study, direct comparisons cannot be made.

Are you tired of taking daily medication for BPH?

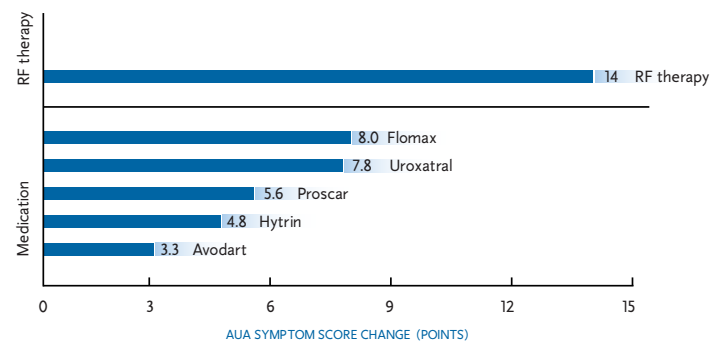

Are you worried about the cost of your drug therapy?

Are you concerned about drug interactions?

Improvement in peak urinary flow rate (1 year)

#### PROSTIVA™ RF Therapy

**Indications:** The PROSTIVA System is indicated for the treatment of symptoms due to urinary outflow obstruction secondary to benign prostatic hyperplasia (BPH) in men over the age of 50 with prostate sizes between 20 and 50 cm<sup>3</sup>.

**Adverse Events:** Side effects may include obstruction, catheterization, bleeding, pain/discomfort, urgency, frequency, and urinary tract infection.

**CAUTION:** Federal law (USA) restricts this device to sale by or on the order of a physician. For a listing of indications, contraindications, precautions and warnings, please refer to the System User Guide.

In November 2005, the Food and Drug Administration granted 510K clearance for PROSTIVA RF Therapy stating that it is substantially equivalent to TUNA® Therapy. This document refers to data gathered using any one of several previous models of Medtronic's RF therapy equipment.
